DESCRIZIONE CAPITOLATO / SPECIFICATIONS/

DESCRIPTION / BESCHREIBUNG

La Porta102 a battente EVOLINE³ è nata per dare ulteriore continuità alle pareti. Lo spessore di mm 102 della porta garantisce l'effetto filomuro sia all'interno che all'esterno della stanza. Il telaio è unico sia per la muratura che per il cartongesso e può essere posizionato sia a spingere che a tirare. Una volta installato, il telaio è pronto per essere tonalizzato come le pareti con vernici murali. In alternativa, il telaio può essere lasciato al naturale, poiché preverniciato di colore bianco. Il telaio è di semplice e veloce installazione. La presenza di zanche e reti, nel caso di allestimento per muratura, e di angoli di riferimento per il posizionamento veloce alla struttura del cartongesso, permettono di ottenere il miglior risultato. Squadri e distanziali in legno e alluminio consentono di mantenere il telaio sempre allineato, evitando deformazioni durante il trasporto e l'installazione. A seguito del montaggio del telaio andranno otturati i forellini che si presenteranno dopo la rimozione dei distanziali. Un'ulteriore peculiarità tecnica è rappresentata dall'utilizzo di cerniere regolabili e a scomparsa, che consentono una perfetta calibrazione della luce tra telaio

e pannello. La serratura magnetica, fornita di serie, sostituisce la serratura più tradizionale. Il pannello tamburato ha uno spessore di 102 mm ed è realizzato con materiali di prima scelta e con mdf da 5 mm. Il pannello viene fornito grezzo o con trattamento di fondo, per facilitare le successive applicazioni di vernici murali o altri tipi di applicazioni. E' inoltre, possibile richiedere il pannello laccato opaco o uniformante sabbiato. Telaio e pannello sono identificati da un numero di matricola per consentirne la rintracciabilità nel caso di consegne separate e per facilitare l'assistenza post vendita.

IN SINTESI

- telaio alluminio lega 6060-T6 preverniciato a polveri RAL 9003 spessore mm 102
- cerniere a scomparsa regolabili 3D
- serratura magnetica
- pannello spessore mm 102

The flush wall swing door 102 EVOLINE³ has been developed to increase the continuity of wall and door. The 102mm-thick panel allows a perfect alignment of the door on the internal and the external wall of the room. The frame is the same for concrete and plasterboard walls and it can be mounted either in push or in pull position. Once installed, the frame can be painted the same colour of the wall or it can be used in its original white colour. The mounting of the frame is fast and simple : an additional frame fixed on the EVOLINE³ standard frame allows the installation on plasterboard walls. In case of brick walls the jamb is anchored to the wall through small steel plates. To avoid deformation during delivery and installing the frame is kept aligned by spacers, which can be removed once the frame has been mounted. The little holes left by the removal of the spacers can be filled with plaster. The flush wall swing door EVOLINE³ has concealed adjustable hinges, which allow a perfect light calibration between frame and panel. Instead of being furnished with a traditional

lock, the door features a magnetic lock. The timbered, 102mm-thick panel is made of a 5mm-thick MDF layer and of other selected materials. The panels can be ordered raw or with a priming treatment that eases the following paintings. The panels can also be matt lacquered or with an uniformizing sandblasted treatment. The panel and the frame are identified by an identification number to make them easily traceable when separately delivered and to simplify post-sale assistance.

SUMMARIZING

- aluminium frame , 102mm thick, made of an aluminum alloy 6060-T6, in a powder-prepainting colour RAL 9003
- 3D adjustable, concealed hinges
- magnetic lock
- 102 mm thick panel

La porte invisible 102 EVOLINE³ fut élaborée pour obtenir encore plus continuité entre le mur et la porte. Grâce à l'épaisseur de 102 mm la porte s'uniformise parfaitement avec la cloison intérieure et extérieure de la chambre. Le châssis est le même pour le mur en maçonnerie et en placo-plâtre. Après le montage le châssis peut être verni de la même couleur du mur ou il peut être maintenu en la couleur blanc originel. L'installation du châssis est simple et rapide: un profil supplémentaire fixé sur le profil EVOLINE³ standard permet l'installation sur mur en placo-plâtre. En cas de mur en maçonnerie les agrafes en acier permettent l'ancre du châssis à le mur. Entretoises maintiennent le châssis aligné pour éviter la déformation pendant le montage ou durant le livraison. L'entretoises peuvent être retiré après le montage et les trous rempli de mastic. La porte invisible EVOLINE³ a les charnières escamotables et réglables pour un parfait calibrage de la lumière périphérique. Un autre

caractéristique technique est l'utilisation d'une serrure magnétique au lieu d'une serrure traditionnelle. Le panneau en bois de 102 mm est réalisé avec une plaque MDF de 5 mm et d'autres matériaux sélectionnés. Il est possible de commander les portes avec un laquage mat ou avec un tâtement uniformisant sablé. Les produits EVOLINE³ sont marqués par une matrice unique qui permet de les identifier facilement en cas de livraison séparé ou pour l'assistance après vente.

RÉSUMÉ:

Die wandbündige Flügeltür 102 EVOLINE³ wurde entwickelt, um eine noch größere Kontinuität zwischen Tür und Wand zu schaffen. Die 102mm-dicke Tür garantiert einen unsichtbaren Übergang von Wand und Tür sowohl im Innen- als auch im Außenraum. Der Rahmen ist für Mauer und für Gipskartonwände geeignet. Die Tür ist in der Version zum Drücken oder zum Ziehen erhältlich. Nach dem Einbau kann der Rahmen in der Farbe der Wand gestrichen oder das vorgestrichene weiße Standardprofil beibehalten werden. Die Montage des Rahmens sowohl für die Drück-als auch für die Ziehversion ist einfach und schnell. Bei Gipskartonwänden ist ein zusätzliches Profil, das am Standard-Rahmen festgestellt ist, für den Einbau notwendig. Bei Mauerwänden werden Lochgitterstreifen verwendet, die die Verankerung des Rahmens in der Wand ermöglichen. Um Verformungen des Profils während Transport und Einbau zu vermeiden, werden Distanzstücke benutzt. Nachdem der Rahmen montiert ist, können die, von der Entfernung der Distanzstücke gebliebenen kleinen Löcher, mit Kitt gefüllt werden. Eine weitere technische Eigenschaft der Tür EVOLINE³ ist die Verwendung von versenkter, regulierbarer Scharnieren, die eine perfekte Kalibrierung des Lichts zwischen Rahmen

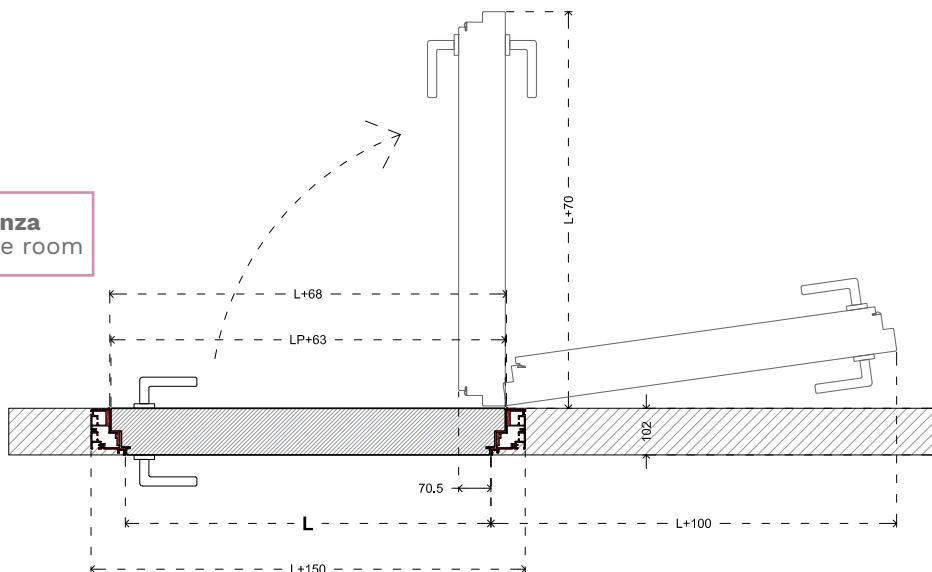

und Türblatt erlauben. Ein magnetisches Türschloss, das zusammen mit der Tür geliefert wird, ersetzt die traditionellen Schlosser. Das 102mm dicke Sperrholz-Türblatt besteht aus einer 5mm- dicken MDF Schicht und anderen ausgewählten Materialien. Das Türblatt kann roh oder mit einer Grundierung, die die folgenden Bearbeitungen erleichtert, bestellt werden. Außerdem liefern wir auf Anfrage Türblättern mit einer Mattlackierung oder mit einer einheitlichen Behandlung sandgestrahlt. Eine Matrikelnummer identifiziert den Rahmen und das Türblatt , um die Zurückverfolgbarkeit der Ware im Fall getrennter Lieferungen zu erleichtern und um die beste Kundenbetreuung zu ermöglichen.

Qualsiasi contestazione non darà il diritto al Committente di ritardare o rifiutare il pagamento.
